

PFGHL FIRST BATCH OF SILK

Update June 2018

WE PRODUCE BEST SILK!

PFGHL, as a top-tiered eco-friendly clothing enterprise with a vision to enhance comfort and sensuality, has always dedicated to ensuring high quality of raw material in the first stage. Several months after investment in over 500 acres of silk production land in Yilong, this month we are happy to announce that silkworms are producing the first batch of silk in our sericulture base.

The suitable weather and fertile soil in Yilong have provided excellent environment for silkworms to nurture excellent silk, as a major raw material for producing premium silk products in factory. The systematic industrial chain of PFGHL, from mulberry trees planting and silkworm cultivation, to reeling, weaving and dyeing, has strictly control quality of products and minimize negative impacts on environment.

Yilong's high-quality raw and semi-finished materials are repurchased by PFGHL Group, with which PFGHL produces self-branded silk products in our factories. To increase productivity and reduce cost, we have recruited technical professionals in coaching local farmers in silkworm breeding. As an enterprise happy to shoulder corporate responsibility, we have also put continuous effort in poverty alleviation. Our investment in sericulture base has created many jobs for local farmers and promoted the economic development in Nanchong.

We would like to express our gratitude to your long-term support and trust. Thank you for your recognition of our products and we will work hard to better satisfy your expectations.
